FPV DRONE PARTS

01. FRAME

The main body of a drone, where all parts are mounted together. Normally made from carbon fiber.

02. MOTORS

These are the powerhouses that give your quad the thrust to reach the insane speeds modern drones are reaching.

03. ESC'S

Electronic circuit with the purpose to vary an electric motor's speed, direction and possibly also to act as a dynamic brake.

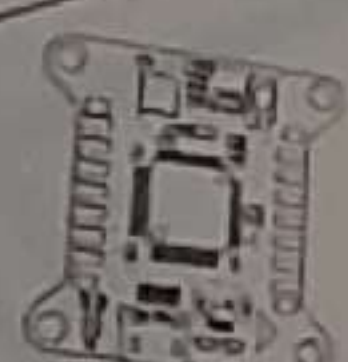

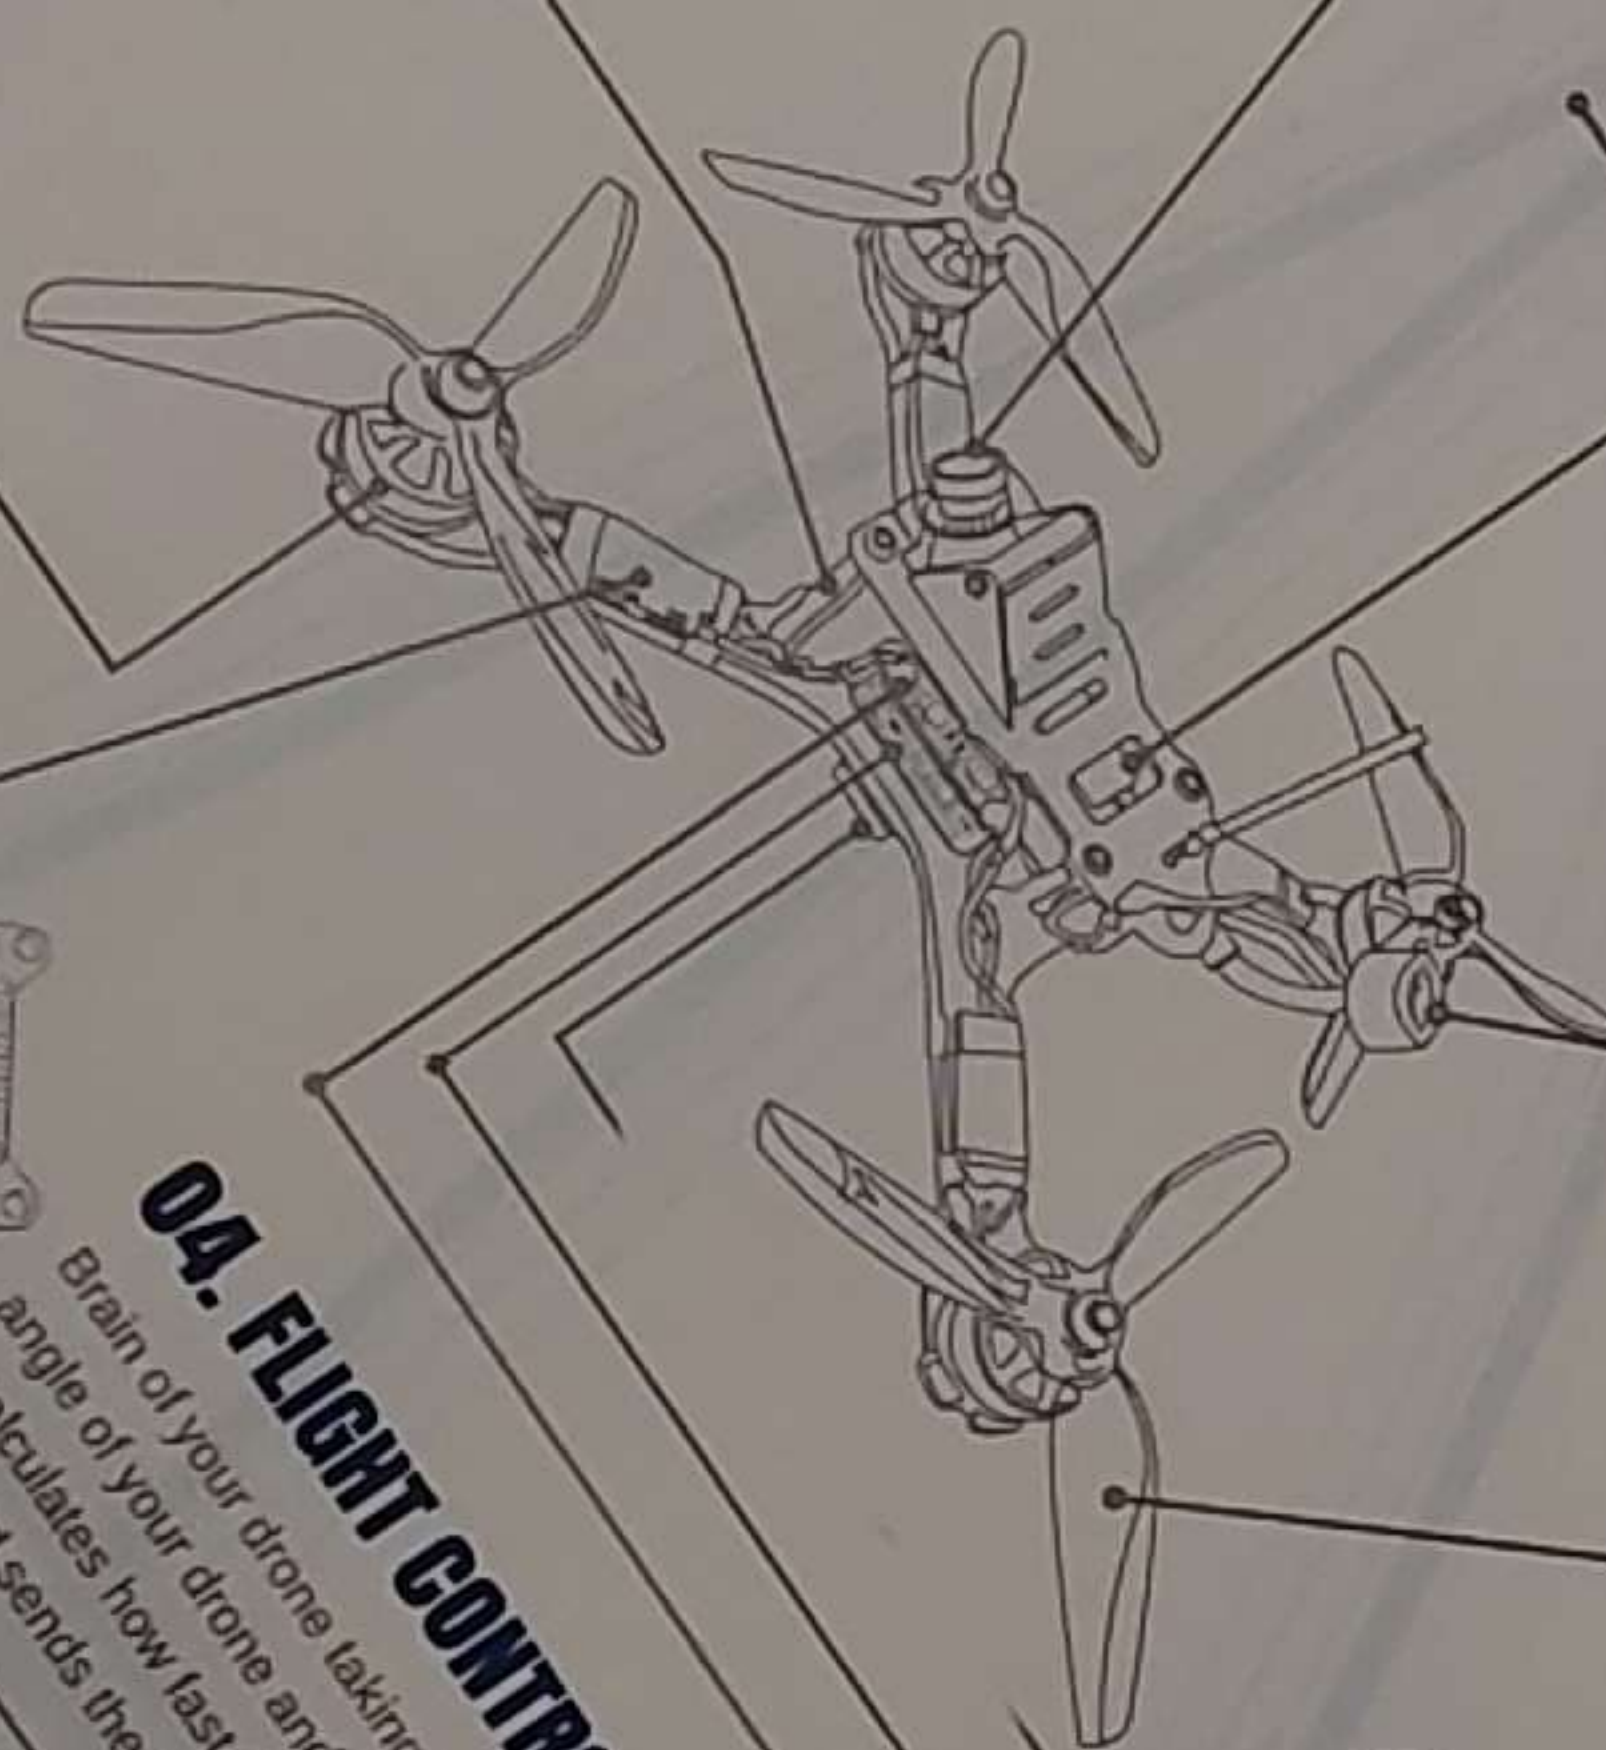

06. FPV CAMERA

This is the eye of your drone, anything it can see you will hopefully see in your goggles!

07. VTX

The video transmitter takes the signal from your camera and sends it out through your antenna.

04. FLIGHT CONTROLLER

Brain of your drone taking into account the angle of your drone and your control input. It calculates how fast the motors should spin and sends the signals to the ESCs.

11. TRANSMITTER

Remote control or Transmitter Tx is an electronic device which produces radio waves with an antenna and allows you to control your craft.

12. GOGGLES

Goggles allow you to see through FPV Camera and fly in First Person View, experiencing immersive quadcopter drone flying.

05. PDB

Power Distribution Board takes your battery voltage and provides various points for you to connect up all of your other electronics.

10. BATTERY

Lipo Battery is a type of rechargeable battery that is commonly used throughout the RC hobby.

09. PROPELLERS

A quadcopter uses two clockwise (CW) and two counterclockwise (CCW) propellers.

08. VIDEO

An FPV setup requires two antennas, one to send out video and another to receive it.
